Quality Migration Services

We are Interactive Decisions, Inc. and have 20+ years experience working with the HP3000, Unix, Windows and other mini computer systems. On these systems, we have done custom programming, migrations to packages, developed commercial applications, performance tuning services with our TRACER/UX product and provided project management. We have knowledge of most HP3000 software systems, including conversion tools like Eloquence and other database systems you will likely be migrating to.

We provide the following migration services:

- Migration Analysis and Planning
- Project Management
- Conversion Programming
- Data Conversions
- New Package Selection Assistance

Low Cost Solutions

We can do most of these services from our location, thereby keeping your costs down. We also can utilize your staff or ours locally, whichever is most cost effective for you.

Independent Opinions

We are proud to offer completely independent opinions. Having been in the software business 20+ years, we have seen the good and the bad. We promise to suggest only the best solutions for your company. We have no affiliation with HP or any other hardware/software vendors.

Moving To Unix, Then Try TRACER/UX

If we help in your migration to Unix, we will use our TRACER/UX product. If you are doing your own migration, please check it out. TRACER/UX sees what any Unix program is doing (no source required). It is the ultimate system/user code monitor. Do performance tuning (call timing, usage charts) and troubleshooting (detail call stepping). Performance tuning services are available.

Call TODAY For A FREE Estimate!!!

Just contact us or go online at Interactive-Decisions.com TODAY for a FREE no obligation estimate of your migration needs.
